PROFESSIONAL SUMMARY

Systems and Cloud Engineer with AWS Cloud Practitioner certification and a production-shaped capstone portfolio spanning AWS, Terraform, Docker, Kubernetes, Helm, Python automation, and CI/CD pipelines. Proven ability to provision multi-tier cloud infrastructure from code, containerize and orchestrate distributed services, automate operational workflows with Python and Bash, and maintain robust observability metrics. Fully remote-ready with reliable power redundancy and high-speed connectivity. Seeking a remote junior or apprenticeship role in Cloud/DevOps engineering.

TECHNICAL SKILLS

Cloud: AWS (EC2, S3, VPC, IAM, Security Groups, CloudFront, CloudWatch, RDS)

Infrastructure as Code: Terraform (modular HCL, remote state backends, drift resolution)

Containers & Orchestration: Docker (multi-stage builds), Docker Compose, Kubernetes (Pods, Deployments, Services, Helm charts)

Linux & Scripting: Ubuntu, Bash, Python (Boto3 automation, script optimization), systemd, journalctl, POSIX file permissions

Networking: TCP/IP, DNS, DHCP, CIDR subnetting, routing tables, firewall rules, tcpdump analysis

CI/CD: GitHub Actions (linting → automated testing → build → Trivy security scanning → registry push → deployment)

Observability: AWS CloudWatch, Prometheus, Grafana, metrics/logs/traces correlation, incident post-mortems

Tools: Git, GitHub, VS Code, AWS CLI, Terraform CLI, Helm CLI

Front-End: HTML, CSS, JavaScript — responsive static sites and interactive prototypes

CERTIFICATIONS

- AWS Certified Cloud Practitioner — Amazon Web Services
- HashiCorp Certified: Terraform Associate — HashiCorp
- AWS Certified Solutions Architect – Associate (SAA-C03) — Amazon Web Services
- Certified Kubernetes Administrator (CKA) — The Linux Foundation

CAPSTONE PORTFOLIO — Production-Shaped Cloud System

One integrated system, three proof layers. All repositories include Architecture Decision Records (ADRs), cost estimates, and structured failure logs. Full source and documentation: github.com/caldeny4201. (Infrastructure/pipeline projects link to code only — a Terraform module or CI pipeline has no browsable live demo; front-end projects below link to both.)

Layer 1 — infra-baseline-aws (Terraform)

Code: github.com/caldeny4201/infra-baseline-aws

- Modular, multi-tier AWS network provisioned entirely from code: VPC, public/private subnets, Internet Gateway, NAT Gateways, and an RDS backend.
- Configured remote state locking via S3 and DynamoDB, automated state drift remediation, and documented manual IAM permission failure recovery exercises.
- *Proves:* Infrastructure-as-Code proficiency, state management, and secure cloud network topology design.

Layer 2 — k8s-deploy-lab + ci-cd-container-workflow (Docker, Kubernetes, Helm, GitHub Actions)

Code: github.com/caldeny4201/k8s-deploy-lab | github.com/caldeny4201/ci-cd-container-workflow

- Containerized a microservice application using optimized multi-stage Dockerfiles, orchestrated via custom Helm charts on a local/remote Kubernetes cluster.

- Built an automated GitHub Actions pipeline executing linting, unit tests, Docker container builds, Trivy vulnerability scanning, artifact registry pushes, and rolling deployments. Includes automated rollback logic.
- *Proves:* Container packaging, Kubernetes orchestration, and safe, hands-off continuous delivery pipelines.

Layer 3 — system-incident-lab + python-automation (Observability & Scripting)

Code: github.com/caldeny4201/system-incident-lab | github.com/caldeny4201/python-automation

- Configured CloudWatch, Prometheus, and Grafana dashboards tracking real-time resource utilization, error rates, and custom metrics.
- Authored a formal disaster-recovery case study and ran structured 30-minute incident drills isolating simulated network failures. Developed Python/Boto3 scripts for automated EC2 lifecycle management and log parsing.
- *Proves:* A disciplined diagnostic troubleshooting loop and operational automation capability under pressure.

ADDITIONAL PROJECTS

Voltguard Electrical

Demo: caldeny4201.github.io/voltguard | Code: github.com/caldeny4201/voltguard

- Engineered a fully responsive 5-page digital presence and service platform for an electrical contracting business, featuring clean component structure and high-performance loading.
- Produced a full suite of client-facing collateral (brochures, quote templates, spec sheets) hosted alongside the site, demonstrating end-to-end delivery beyond just code.

Fathom — Computer Science Study Platform

Demo: caldeny4201.github.io/fathom | Code: github.com/caldeny4201/fathom

- Built and deployed a static resource indexing application organizing complex curriculum topics across institutions.

LexPilot — Invoicing Prototype

Demo: caldeny4201.github.io/lexpilot | Code: github.com/caldeny4201/lexpilot

- Front-end billing and invoicing prototype built with HTML, CSS, and JavaScript, exploring a clean workflow for legal professionals to generate, track, and manage invoices with trust-account awareness.

WORK EXPERIENCE

Freelance Web Developer | Self-Employed

- Designed, developed, and maintained custom web infrastructure and digital tools for clients.
- Managed client requirements, direct technical delivery, hosting environments, and ongoing operational support.

Conference Assistant (Part-time) | The Travel Link

- Assisted delegates with on-site technical infrastructure, registration queries, and event system troubleshooting.

Sales Representative | DN Agencies

- Executed customer outreach, technical product needs analysis, negotiations, and client relationship management.

REMOTE READINESS

- **Power & Infrastructure:** Dedicated inverter backup system with automatic LTE failover and high-speed fiber internet connection.
- **Availability:** Fully operational across UK, EU, and US time zones.
- **Communication:** Professional written and verbal English communication (C2 proficiency).

EDUCATION

National Senior Certificate | Treverton School
